Office Action Summary	Examiner	Art Unit				
	Duc T. Duong	2616				
The MAILING DATE of this communication Period for Reply	appears on the cover sheet v	vith the correspondence addre	!ss			
A SHORTENED STATUTORY PERIOD FOR RE WHICHEVER IS LONGER, FROM THE MAILING  - Extensions of time may be available under the provisions of 37 CF after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period for reply within the set or extended period for reply will, by stany reply received by the Office later than three months after the meanned patent term adjustment. See 37 CFR 1.704(b).	G DATE OF THIS COMMUN R 1.136(a). In no event, however, may a b. criod will apply and will expire SIX (6) MC tatute, cause the application to become A	ICATION.  a reply be timely filed  ONTHS from the mailing date of this comma  ABANDONED (35 U.S.C. § 133).				
Status						
1) Responsive to communication(s) filed on 0	6 July 2006.		•			
	This action is non-final.					
Disposition of Claims						
4) Claim(s) 1,2,5-8,11-19,21 and 22 is/are pe	nding in the application.					
4a) Of the above claim(s) is/are with	_					
5) Claim(s) 7,8,11-14,18,19,21 and 22 is/are						
6) Claim(s) <u>1,2,5,6 and 15-17</u> is/are rejected.						
7) Claim(s) is/are objected to.						
•	8) Claim(s) are subject to restriction and/or election requirement.					
Application Papers						
9)☐ The specification is objected to by the Exan	niner.					
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.						
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).						
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).						
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.						
Priority under 35 U.S.C. § 119						
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of:						
1. Certified copies of the priority documents have been received.						
2. Certified copies of the priority documents have been received in Application No						
3. Copies of the certified copies of the priority documents have been received in this National Stage						
·	application from the International Bureau (PCT Rule 17.2(a)).					
* See the attached detailed Office action for a list of the certified copies not received.

#### **DETAILED ACTION**

#### Response to Amendment

1. Applicant's arguments with respect to claims 1, 2, 5, 6, and 15-17 have been considered but are most in view of the new ground(s) of rejection.

### Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 2, 5, and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyoshi et al (US Publishing 2003/0022629 A1) in view of Dobson (US Patent 6,650,643), further in view of Feuerstein et al (US Patent 6,141,565).

Regarding to claims 1 and 2, Miyoshi discloses a method for controlling a data transmission between a transmission source and a receiving device in a wireless communication system, the method comprising receiving a current transmission at a current data rate for a current transmission interval (fig. 6; the receiving RF section 112 receive data at a transmission rate); detecting an average throughput for the data transmission and reflective of the current transmission (fig. 6 page 6 paragraph 0091; the throughput calculation section 401 determine the average throughput of the transmission); comparing the detected average throughput against a threshold throughput (fig. 6 page 6 paragraph 0092; the table rewriting section 402 compare the determined average throughput with a predetermined throughput threshold); and if the

Art Unit: 2616

detected average throughput exceeds the threshold throughput decremented the contents of a communication mode table 102 to indicate a channel downlink quality (fig. 6 page 6 paragraph 0097).

Miyoshi fails to teach the step of signaling the transmission source to stop the data transmission if the detected average throughput exceeds the threshold throughput and signaling the transmission source to resume the data transmission if the threshold throughput is not exceeded.

However, Dobson discloses a method for handling data transmission between a source 10 and a destination 12 comprising the step of signaling to the source 10 with a message indicating the call request is reject when the averaged load (throughput) exceeds the threshold load (throughput) and signaling to the source 10 with a message indicating the call request is accept when the averaged load (throughput) does not exceeds the threshold load (throughput), fig. 5 col. 6 lines 53-62.

Thus, it would have been obvious to a person of ordinary to include the step as taught by Dobson in Miyoshi's system to effectively manage transmission flow without running out of internal resources, such as memory.

Dobson in view of Miyoshi fails to teach for the performance of the receiving device is determined based on detecting packets dropped.

However, Feuerstein discloses an apparatus for providing optimization to various network elements in a wireless network, wherein packet drop is used to determine the network conditions (fig. 1-3 col. 8 lines 61-67).

Art Unit: 2616

Thus, it would have been obvious to a person of ordinary skill in the art to arrange for a determination of throughput using bit error rate as taught by Feuerstein in Dobson and Miyoshi's system to monitor network changes.

Regarding to claim 5, Miyoshi discloses the performance of the receiving device is characterized prior to first field use of the receiving device page 6 paragraph 0095).

Regarding to claim 6, Miyoshi discloses dynamically characterizing the performance of the receiving device to determine the threshold throughput (page 6 paragraph 0094).

4. Claims 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyoshi et al (US Publishing 2003/0022629 A1) in view of Dobson (US Patent 6,650,643), further in view of Andersson et al (US Patent 6,519,461 B1).

Regarding to claim 15, Miyoshi discloses the data transmission is transmitted in time division intervals (page 1 paragraph 0010).

Regarding to claims 16 and 17, Miyoshi discloses the wireless communication system is an HDR (page1 paragraph 0003). However, Miyoshi fails to teach the HDR system is CDMA or W-CDMA. However, to arrange an HDR system as CDMA or W-CDMA would have been obvious to a person of ordinary skill in the art since such system is well known in the art in wireless communication system.

## Allowable Subject Matter

5. Claims 7, 8, 11-14, 18, 19, 21, and 22 are allowed.

#### Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc T. Duong whose telephone number is 571-272-3122. The examiner can normally be reached on M-F (9:00 AM-6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D. Vu can be reached on 571-272-3155. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Art Unit: 2616
